

Resume

Basic Information

Name : Anish Sudhakar Warushe
Course : PG-DAC, Feb26
Address : Mali galli , Kapshi Senapati, Kolhapur, MAHARASHTRA

CCPP ID : Not Assigned

Academic Details

Level	Stream	Institute	Board/University	Passing Year	Degree %	Division
BTech	Computer Science & Engineering	KIT College Of Engineering Kolhapur	Shivaji University , Kolhapur , Maharashtra	2025	72.6 %	I
XII	Science	Sai International School And Jr College ,Gadhingalaj	Maharashtra State Board	2021	87.5 %	I
X	General	Ranade Vidyalay Kapshi Senapati	Maharashtra State Board	2019	85.2 %	I

Academic Projects

Title : Finix Bank — E-banking platform
Platform : Java 21, Spring Boot, Spring Security, Spring Cloud Gateway, Netflix Eureka, React.js, ASP.NET Core Web API, Python, REST APIs, JWT, MySQL, RabbitMQ, Docker, Maven, Git, GitHub, Swagger, Groq LLM. **Duration** : 1 Month
Description : Developed a production-grade E-Banking System using microservices architecture with React.js, Spring Boot, ASP.NET Core Web API, Python, RabbitMQ, MySQL, Spring Cloud Gateway, and Netflix Eureka. Designed independently deployable Banking, Notification, and GenAI Support services communicating via REST APIs and asynchronous RabbitMQ messaging, following the Database-per-Service pattern for scalable, loosely coupled architecture. Built an AI-powered banking chatbot using Groq LLM with tool-calling agents, human-in-the-loop approval, structured outputs, and prompt injection protection. Engineered secure JWT-based authentication using Spring Security, with centralized routing, CORS handling, and request filtering via Spring Cloud Gateway, and service discovery through Netflix Eureka. Applied Clean Architecture, SOLID principles, Repository Pattern, and Dependency Injection with centralized exception handling and structured logging for a resilient, cloud-native distributed system.

Title : FixItNow-Household-Repair-System
Platform : Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, MySQL, React.js, Axios, JWT Authentication, REST APIs, Maven, Git, Spring Mail, Postman **Duration** : 3 Months
Description : Engineered a full-stack Household Repair Scheduling System using Java 21, Spring Boot, React, MySQL, and RESTful APIs to streamline household service booking and contractor management. Designed a layered MVC architecture with Repository, Service Layer, DTO, and Dependency Injection patterns to ensure modularity and maintainability. Implemented JWT-based authentication and role-based authorization using Spring Security for Admin, Customer, and Contractor access control. Developed modules for service management, booking lifecycle, contractor assignment, customer management, ratings, and email notifications. Integrated Hibernate/JPA with MySQL for efficient persistence and built scalable REST APIs with validation and secure request processing, enabling reliable service scheduling and centralized administration.
